ChooseAttr | QID 13363937 | Is the steam white or black? | Full: White

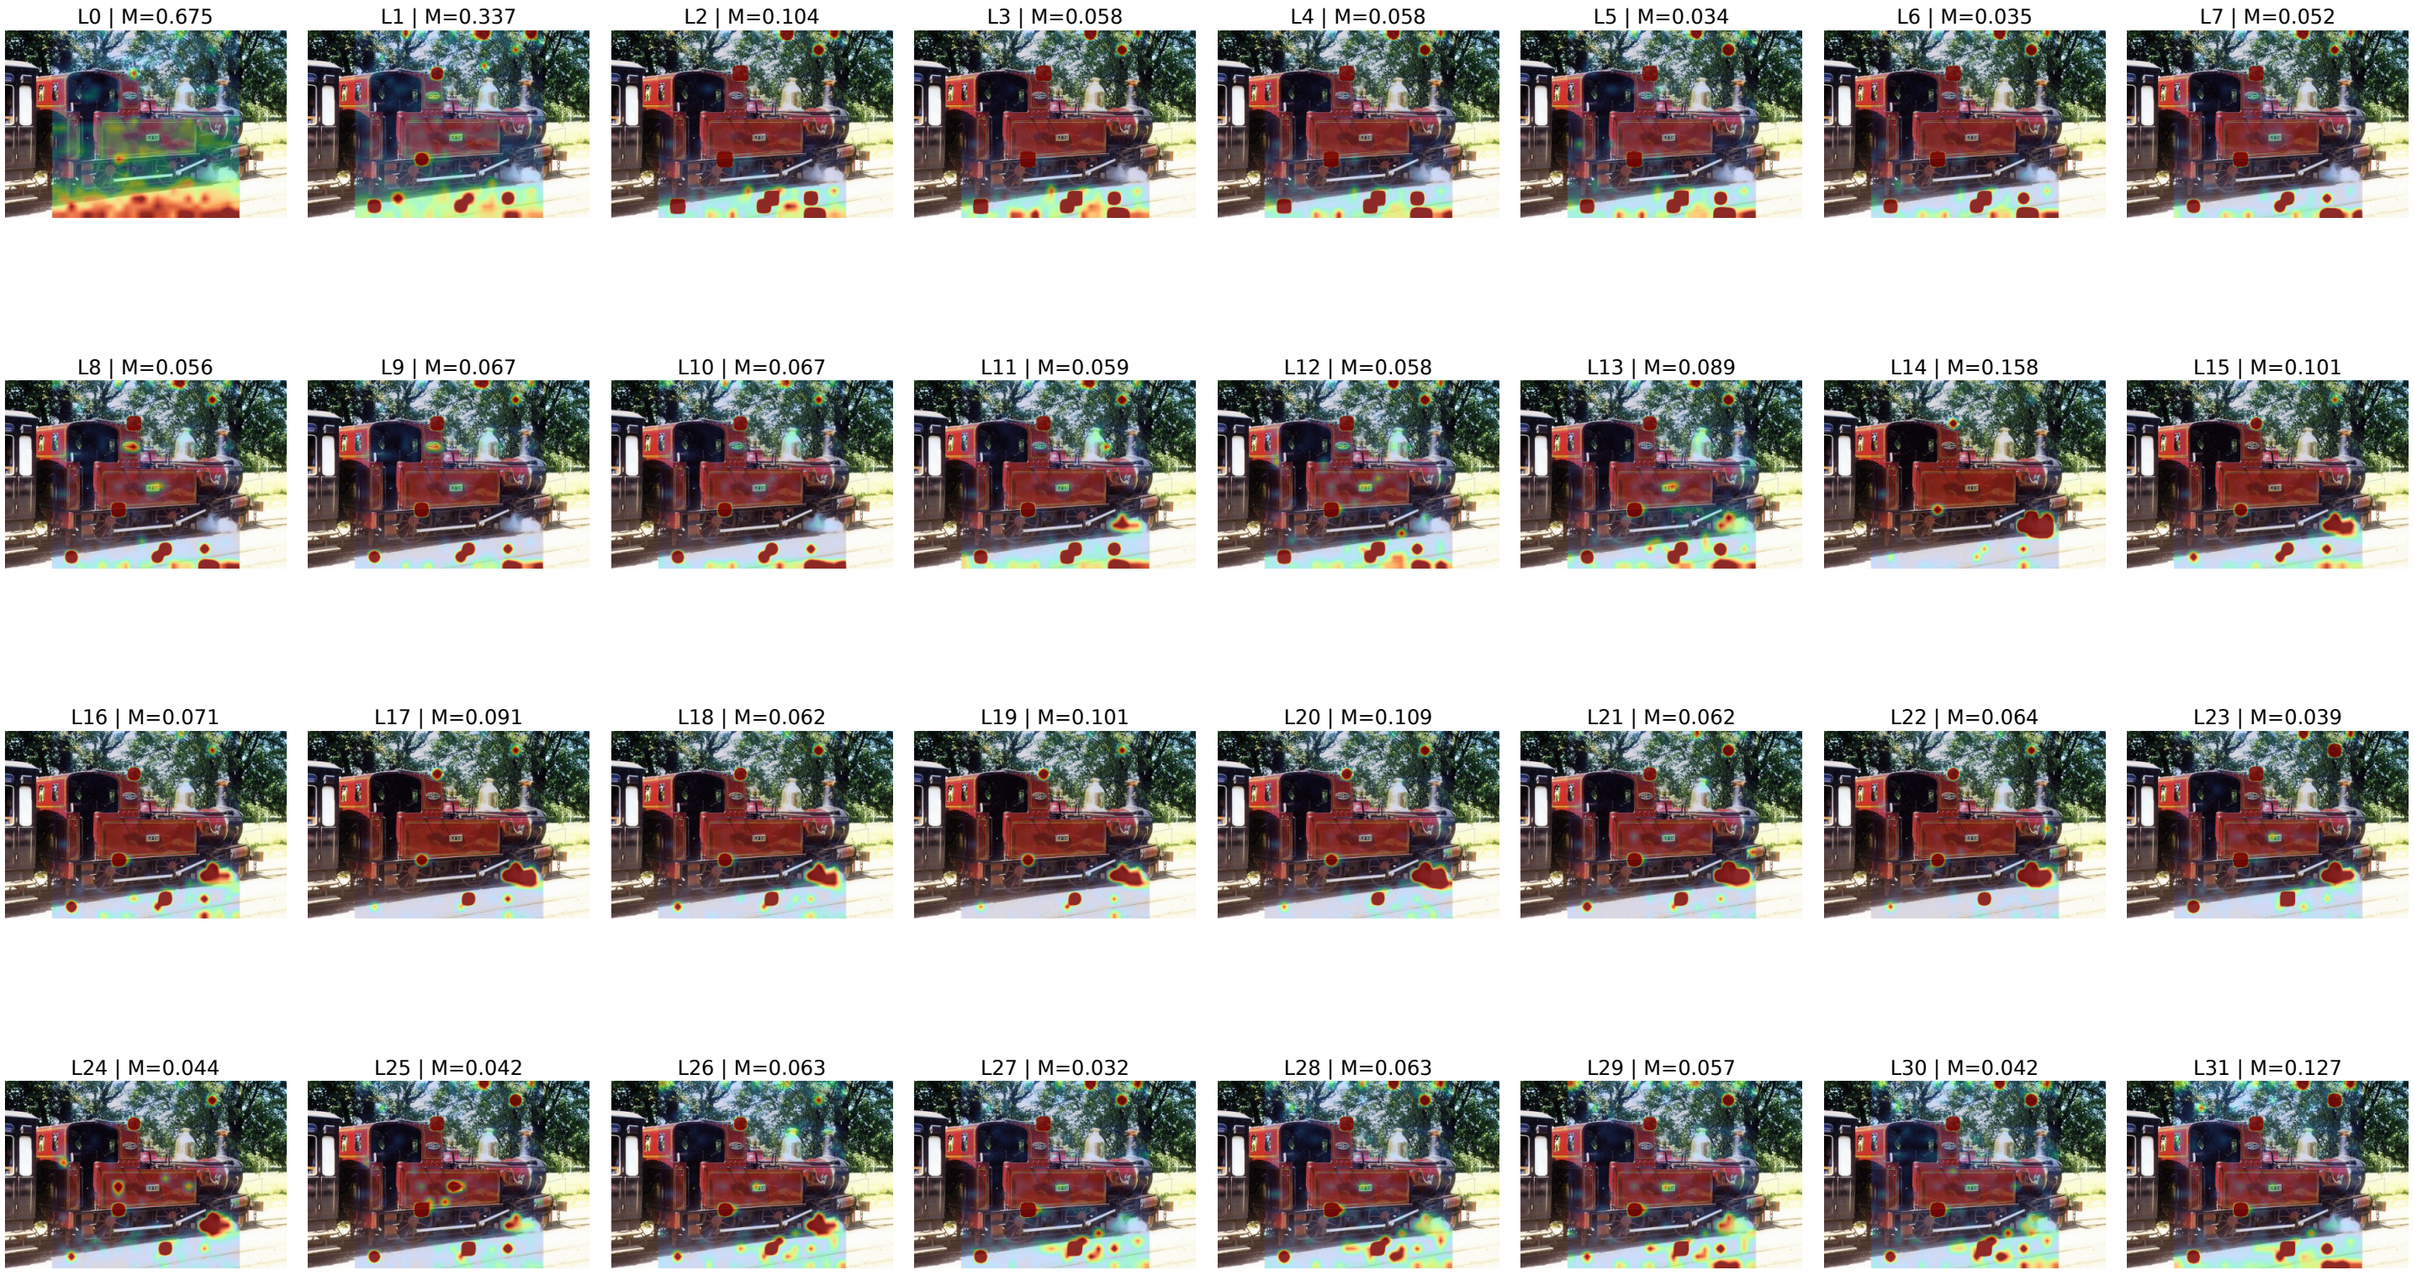

Visual-conditional probability; one logarithmic color scale shared by all 32 layers in this case. M = raw Image mass.

Native head-averaged 24 x 24 maps. No probability values changed; no new inference. Outside the CLIP center crop is unobserved.

ChooseAttr | QID 13363937 | Is the steam white or black? | Full: White

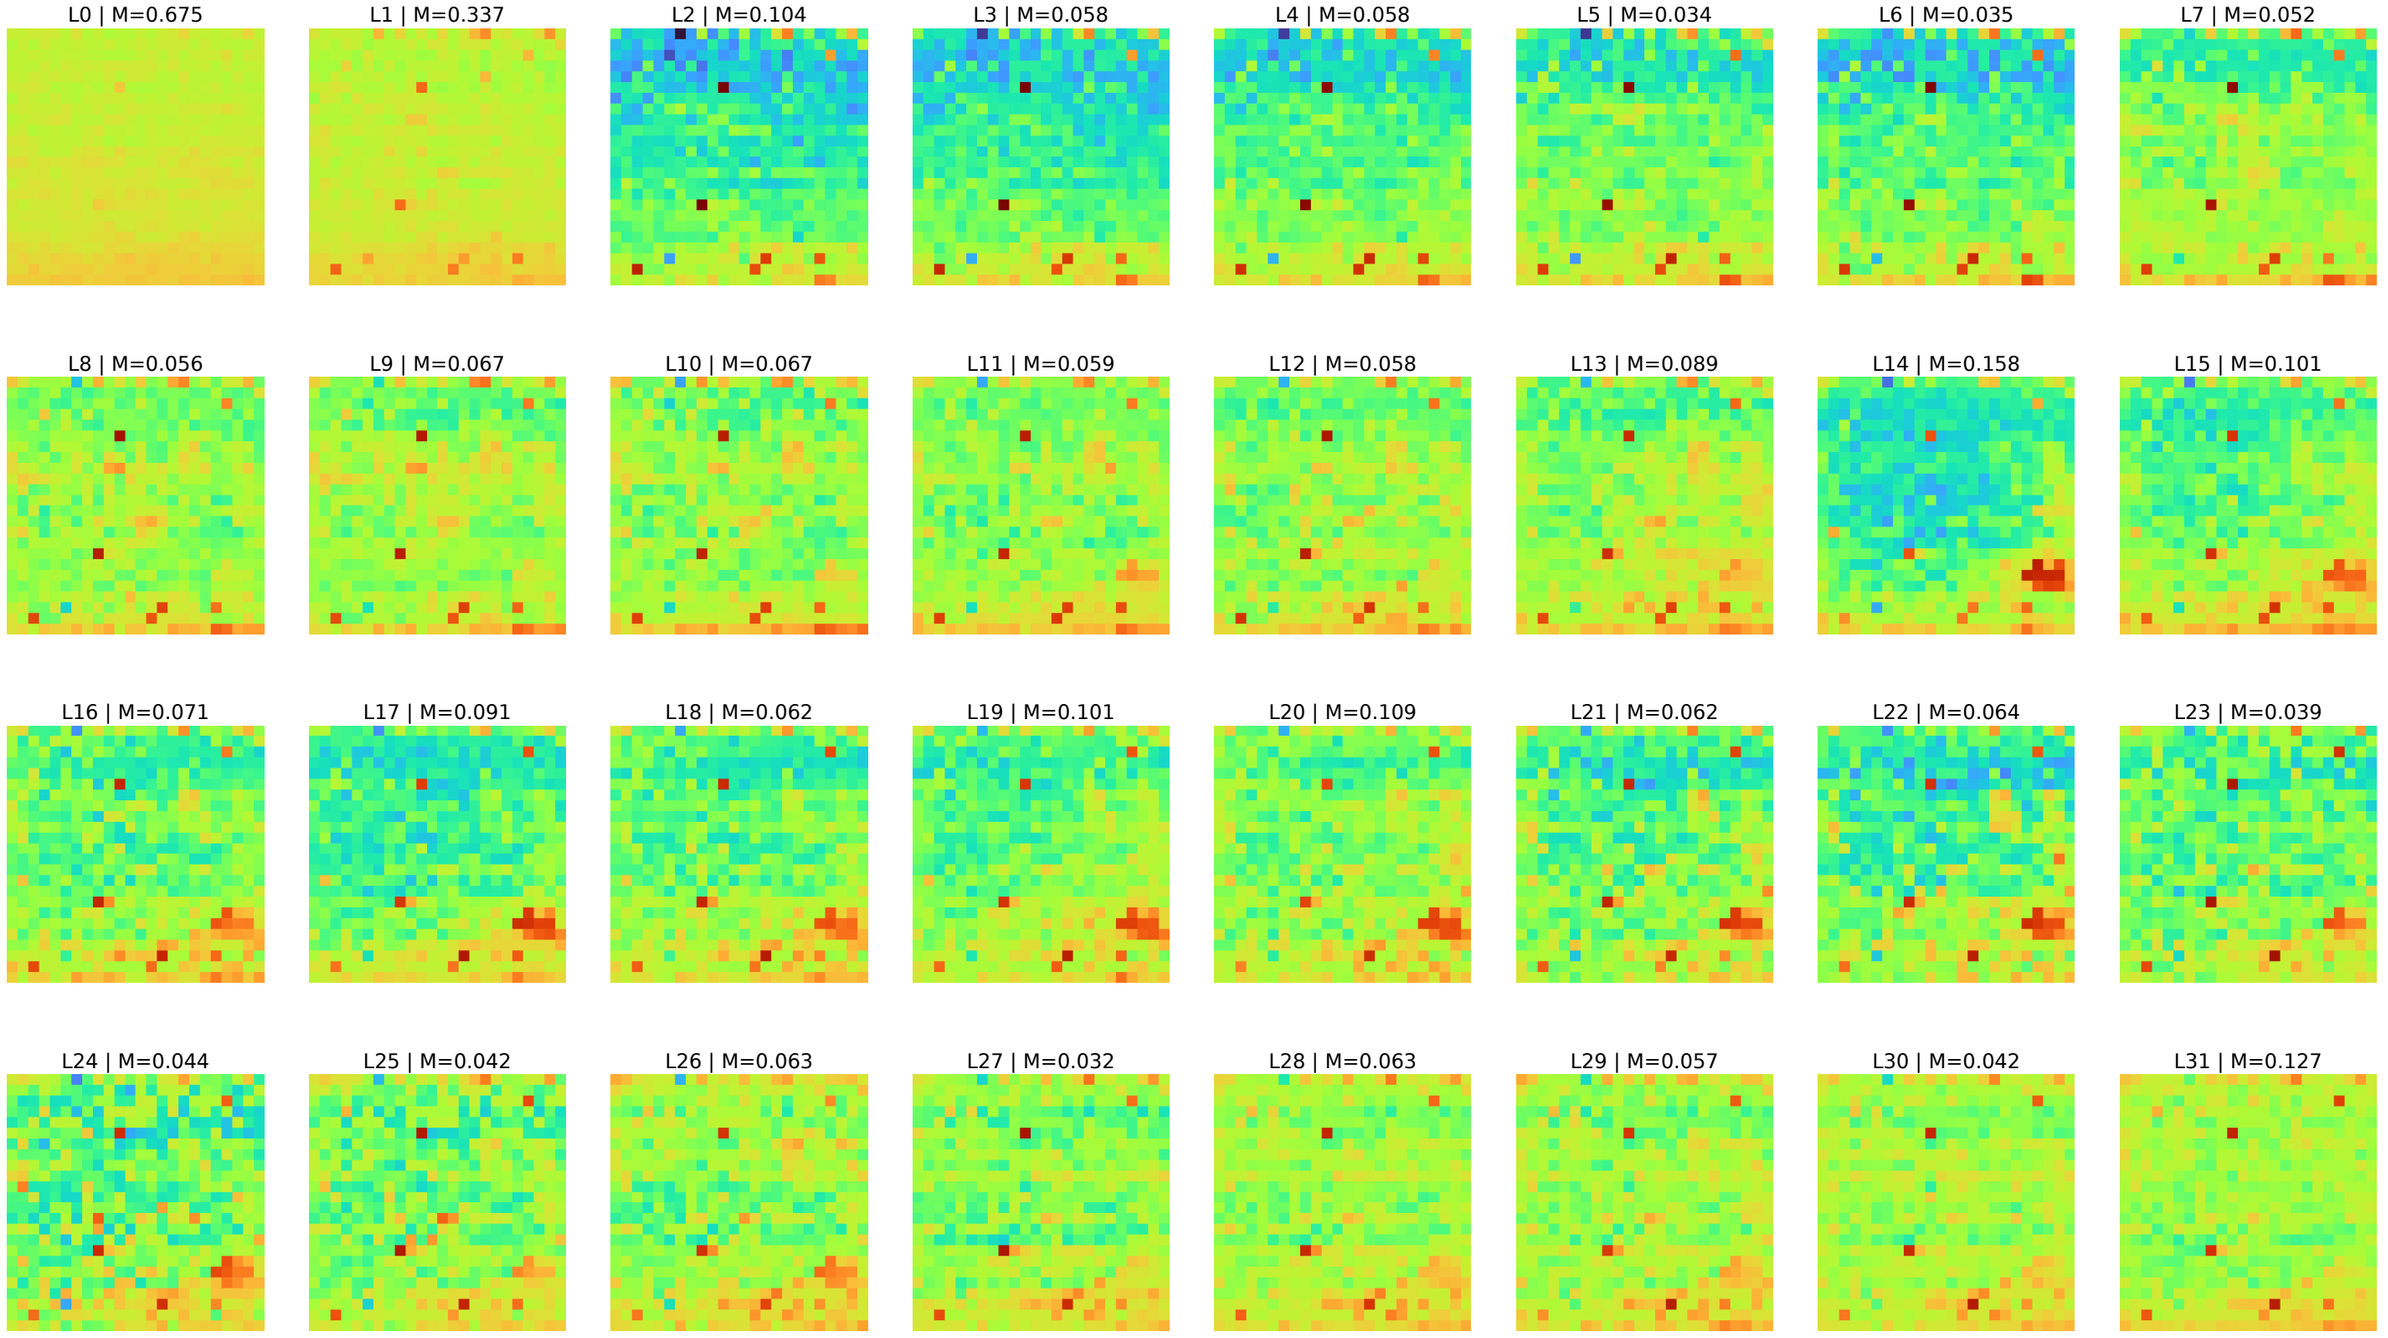

Per-layer 2-98% contrast enhancement: colors show relative within-layer display strength, NOT probability. Do not compare color intensity across layers.

Native head-averaged 24 x 24 maps. No probability values changed; no new inference. Outside the CLIP center crop is unobserved.
